KUBERNETES + OLLAMA + OPEN WEBUI

01. Cluster Verification & Persistent Storage

Running pods, ClusterIP & NodePort services, and Bound PVC storage (10Gi & 1Gi)

```
yasir@server:~$ kubectl get pods,svc,pvc -n local-ai
NAME                             READY   STATUS    RESTARTS      AGE
pod/ollama-5c4d8c7d97-89v62      1/1     Running   1 (4m27s ago)   12h
pod/openwebui-cdf696b96-b5wnh    1/1     Running   1 (4m27s ago)   12h

NAME                        TYPE        CLUSTER-IP      EXTERNAL-IP   PORT(S)          AGE
service/ollama-service      ClusterIP   10.43.122.200   <none>        11434/TCP        12h
service/openwebui-service   NodePort    10.43.4.171     <none>        8080:30080/TCP   12h

NAME                                    STATUS   VOLUME                                     CAPACITY
persistentvolumeclaim/ollama-pvc        Bound    pvc-0e25ca96-d8d1-4f90-9980-bffa721bddc7   10Gi
persistentvolumeclaim/openwebui-pvc     Bound    pvc-f3727d0f-7043-47a1-909d-32775518eefa   1Gi
```

KUBERNETES + OLLAMA + OPEN WEBUI

02. Live Model Inference via Open WebUI

Connected via internal Kubernetes DNS (NodePort:30080) running Qwen 2.5
